

JAWS Team Members: Olivia Knapp, Karla Ramos, and Ashwin Chockkalingam

The JAWS team developed three analyses using global shark incident logs developed from the Shark Research Institute. The original data compiles shark incidents from ancient times to the present. As a group it was decided to do the last 20 years as it was less sparse.

Source: <https://www.sharkattackfile.net/incidentlog.htm>

Questions developed:

- Which countries in this data set have the highest rate of fatal shark attacks?
- Are there major differences in the fatal shark attacks based on the sex of the victims?
- Which Shark species are documented to have the most fatal attacks in the past 20 years?
